Open Source enthusiastic / Ruby Fan-boy.

As Ruby on Rails developer I have strong knowledges of every layer of the framework. As a software designer I also handle a big set of patterns and architectures. I have expertise scaling all kind of web applications applying a wide range of technologies such us message queues, proxies, reverse proxies, cache servers, cache strategies and complex DB configurations (clusters, master-slave, tears, table partitions).

Stronger Technical Skills

ruby, ruby on rails, rack, html, css, javascript, jquery, php, symfony, linux, bash, mysql, postgresql, memcached, cucumber, rspec

Languages

Spanish – Native
English – Advanced

Education

Information Systems Engineer – Universidad Tecnológica Nacional

Experience

Freelancer -> January 2004 – Present

I have worked over several customized software solutions (most of them related with web environments) involving a lot of different technologies. Although I prefer to work over Ruby solutions I am a flexible developer that understands that every problem requires a different solution and different solutions may perform better with different technologies.

Ruby/Ruby on Rails Engineer at Globant -> September 2010 – Present

I am focused on the design and creation of hi performance/availability web, wap and sms applications with rich user interfaces. I am also in charge of organize the development process and lead the developers in order to ensure the productivity and quality of the projects while creating a friendly environment for them.

Ruby/Ruby on Rails - PHP/Symfony Engineer at Teracode -> October 2008 - September 2010

I was in charge of the design, creation and migration of hi performance/availability web, wap and sms applications with rich user interfaces. I was also organizing the development process and leading the developers in order to ensure the productivity and quality of the projects while creating a friendly environment for them.

Ruby Engineer at Enratio -> June 2007 - October 2008

Starting as Ruby developer I ended up leading a couple of QC development teams. We were in charge of the creation of customized automation tools with a complex reporting systems for huge web applications such us MercadoLibre.com and Despegar.com.
